IV. GAULISH

1. GENERAL INFORMATION

Gaulish is that Old Celtic language about which we are best informed – still it cannot be called a well-attested language. Gaulish in the strict sense is the Old Celtic language that was spoken in the area of modern France, ancient Gaul. An exception is Aquitain (= South-West France) where a separate language called Aquitanian (sometimes also called ‘Sorothaptic’), an early relative of Basque, is attested. In a wider sense all those Old Celtic parts of the European Continent may be said to belong to the Gaulish language area which do not belong to the Celtiberian or Lepontic language areas. This takes in a far stretch of lands from Gaul across Central Europe (Switzerland, South Germany, Bohemia, Austria), partly across Pannonia and the Balkans until Asia Minor (Galatia). Old British is usually included as well, and for some scholars Lepontic is only an archaic dialect of Gaulish. The linguistic remains of these areas, mainly placenames and personal names, very rarely non-onomastic material, do not exhibit differences from Gaulish beyond the trivial (e.g. Galat. PN ∆ειταρος/Deiotaros = Gaul. *Dēotarys ‘bull of heaven’; y, for which there was no letter in the classical Greek script, is either not written or has disappeared in front of o). Thus it seems appropriate to use the term ‘Gaulish’ in this broad sense. On the other hand, it should come as no surprise if new finds of texts outside of Gaul would reveal more decisive linguistics differences from Gaulish in the narrow sense, going beyond the mere ‘dialectal’. Perhaps one day we will have to speak of languages like Helvetian, Noric, Boic, Galatian etc. Even in Gaul itself the numerous linguistic testimonies do not form a coherent picture, but display peculiarities that may reflect dialectal divisions.

Gaulish probably has the longest period of attestation of all Old Celtic languages. The first documents start to appear in the 3rd c. BC. The lower end can not be determined precisely; for this question, see chapter 2.1. below.
Ill. 1.2.: Gaul and its peoples (from: RIG II-2, 10).
2. PERIODISATION OF GAULISH

Gaulish texts are attested for approximately three quarters of a millennium. To better describe the apparent chronological differences that can be met with in these texts it is necessary to divide the language into periods. The epigraphic, phonological, morphological and social criteria applied here allow a division into three periods, for which the terms Early Gaulish, Middle Gaulish and Late Gaulish shall be used. The middle period is one of transition. Since most Gaulish texts can only be very roughly dated, by necessity all chronological statements must remain vague. Pierre-Yves LAMBERT (‘Gaulois tardif et latin vulgaire’, ZCPh 49/50 (1997), 396–413) divides the language into two periods, Old Gaulish (gaulois ancien) and Late Gaulish (gaulois tardif). Despite the fragmentary attestation of Gaulish, enough material is known today to support this periodisation with sufficient examples, even though by necessity questions of dialectal subdivision or of absolute dates can only be tackled provisionally. Linguistic developments may have proceeded in different speeds at different places.

1. Early Gaulish covers the Gaulish inscriptions in the Greek and Lepontic alphabets, i.e. the Gallo-Greek and the Gallo-Etruscan texts, the earliest texts in the Roman alphabet, and Gaulish coinage. These texts have been edited mainly in RIG I, RIG II-1 and RIG IV. To this must be added material from the classical Nebenüberlieferung (transmission of Gaulish language material by Greek and Latin authors) in the pre-Christian period. In absolute dates this period runs from the 3rd to the 1st centuries B.C. and may have extended a little further into the first decades of the Christian era. This stage of the language is distinguished by archaisms in the vowel system and by fully fledged and intact inflectional endings. The main morphological archaisms are the gen. sg. of the ě-stems in -as, and the ā-stem acc. sg. in -an (-am). Occasionally, however, the seemingly late feature of loss of -s in word-final position can be observed. Sociolinguistically this period is distinguished by the fact that Gaulish is the primary means of communication in Gaul, being used — as far as we can tell — in all communicative situations.

2. Middle Gaulish means the Gaulish language approximately from the beginning of the Christian era until the 2nd or 3rd c. A.D. Both the upper and the lower ends are vague. Typical for the Middle Gaulish period is the exclusive use of the Roman alphabet, frequently in its cursive variant. That a consciousness for a national Gaulish script did exist at the time may be gleaned from the use of peculiar letters (ỳ, č, Ğ), inherited from the earlier period of Gallo-Greek writing and used to represent sounds for which no letters existed in the Roman script. The language still resembles Early Gaulish to a large extent, only a few morphological changes have taken place. The gen. sg. of the ā-stems has become -iās instead of -as, the acc. sg. -in (-im) instead of -an (-am). The longish inscriptions from Chamalières and Larzac, the potters’ graffiti from La Graufesenque, the calendars and numerous ‘private texts’ (legends on pottery, etc.) can be ascribed to this period. These texts have been edited mainly in RIG II-2 and RIG III. A sociolinguistic change has taken place. During the 1st c. A.D. a process of ‘urbanisation’ and ‘Romanisation’ sets in, that slowly transforms Gaulish society and consequently the sociolinguistic situation. The primary language of administration and perhaps also of long-distance trade is now Latin. Gaulish is no longer used in all communicative situations, but is slowly receding to private and to rural environments. As with Middle Irish, Middle Gaulish displays no features that would make it tangible as such, but it is better conceived of a transition from one state (Early Gaulish) to another (Late Gaulish).

3. Late Gaulish refers to the final period of Gaulish until its death at an indetermined date around or after the middle of the 1st mill. A.D. The most important phonological innovation observable in the inscriptions is the loss of all final s and n (m), even though there are isolated cases of the loss (or non-spelling) of s already in Early Gaulish. There is some evidence for phonetic lenition word-internally. Texts from this period are rarer than from the preceding. The most important documents are the tile from Châteaubleau (found 1997) and, with some reservation, Endlicher’s Glossary. The texts have been edited mainly in RIG II-2. Those documents that have come down to us do not give the impression of a language spoken by half-competent speakers, but of a language that is still undergoing its own developments, even though under strong influence from the Latin-Romance superstrate. Sociolinguistically we have to reckon with a further pull-back of the language from the urban centres into rural retreats, accompanied by a loss of social prestige of its speakers.
2.1. EXTERNAL TESTIMONIES FOR GAULISH IN LATE ANTIQUITY

The most important extra-linguistic pieces of evidence for the survival of Gaulish in the middle of the 1st mill. A.D. are reports by late-antique authors. Unfortunately these testimonies are more often than not ambiguous.

1. Irenaeus of Lugdunum (2nd c.) says in his introduction to Aduersus Haereses I, praef. 3: Non autem exquires a nobis, qui apud Celtas commoramur et in barbarum sermonem plerumque uacamus, orationis artem [...] (Οὐκ ἐπιζητήσεις δὲ παρ᾽ ἡμῖν, τῶν ἐν Κελτοῖς διατριβόντων καὶ περί βαρβαρον διάλεκτον τὸ πλεῖστον ἀμοιβαμένον, λόγων τέχνην [...] ) ‘Do not expect rhetorical art from us, who live with the Celts and usually conduct our businesses in the barbarian tongue (?)’. […].’

2. Aulus Gellius (born between 110 and 130 A.D.) relates the following episode in his collection Notitia Atticae (composed ca. 180):

‘For instance in Rome in our presence, a man experienced and celebrated as a pleader, but furnished with a sudden and, as it were, hasty education, was speaking to the Prefect of the City, and wished to say that a certain man with a poor and wretched way of life ate bread from bran and drank bad and spoiled wine. “This Roman knight”, he said, “eats apluda and drinks flocces.” All who were present looked at each other, first seriously and with an inquiring expression, wondering what the two words meant; thereupon, as if he might have said something in, I don’t know, Gaulish or Etruscan, all of them burst out laughing.’ (after BLOM 2007: 183)

It is unclear whether this episode truly relates to Gellius’ own time or is a literary anecdote from an earlier period.

3. The Greek satirist Lucian (ca. 120 – after 180) informs us in his pamphlet against the pseudo-prophet Alexandros (around 180) about the use of interpreters in Paphlagonia (northeast of Galatia): ἀλλὰ καὶ βαρβάροις πολλάκις ἔρχησεν, εἰ τῇ πατρίῳ ἑρωιτο φωνῇ, Συριστὶ ἢ Κελτιστὶ, ῥαδίως ἐξερίκοντον τινὰς ἐπιδημοῦντας ὁμοεθνεῖς τοῖς δεδωκόσιν. He gave oracles to barbarians many times, given that if someone asked a question in his native language, in Syrian or in Celtic, he easily found residents of the same people as the questioners’ (after Eugenio Luján, ‘The Galatian Place Names in Ptolemy’, in: Javier de Hoz, Eugenio R. Luján, Patrick Sims-Williams (eds.), New Approaches to Celtic Place-Names in Ptolemy’s Geography, Madrid: Ediciones Clásicas 2005, 263). Lucian writes about a current situation encountered by himself; the case for a living Celtic language in 2nd-century Galatia is quite good.

4. In the Digesta XXXII, 11 of Ulpian (222–228) it is decreed that fideicommissa (testamentary provisions) may also be composed in Gaulish: Fideicommissa quocumque sermone reliquis possunt, non solum Latina uel Graeca, sed etiam Punica uel Gallica uel alterius cuiuscumque gentis ‘Fideicommissa may be left in any language, not only in Latin or Greek, but also in Punic or Gallician or of whatever other people.’

5. The best known piece of evidence for Late Gaulish is found in St. Jerome’s (331–420) commentary on St. Paul’s letter to the Galatians, written in the year 386/7. In it he says that the language of the Treveri in the Belgica is similar to that of the Galatians: Galatas excepto sermone Graeco, quo omnis oriens loquitur, propriam linguam eandem paene habere quam Treuiores ‘Apart from the Greek language, which is spoken throughout the entire East, the Galatians have their own language, almost the same as the Treveri’ (Commentarii in Epistulam ad Galatas II, 3 = Patrologia Latina 26, 357). Even though St. Jerome spent some time both with the Treveri (370) and with the Galatians (373/4), this statement need not be based on his personal experience, but could reflect a literary commonplace taken from a now lost work of an author like Varro.
6. An episode of the *Historia Augusta* (dated around the turn of the 5th c. A.D.), ascribed to the historian Lampridius, tells about a druidess who prophesies to emperor Alexander Severus (222–235) in Gaulish: *mulier Druias eunti exclamauit Gallico sermone* (*Historia Augusta, Alexander Severus* LX, 6). The *Historia Augusta*, however, is a notoriously fictitious work of history, as are its alleged authors. The episode has not the slightest evidential value (see Andreas Hofeneder, ‘Die ‘Druidinnen’ der *Historia Augusta*, *Keltische Forschungen* 3 (2008)).

7. In the *Dialogi de Vita Martini* I, 26 by Sulpicius Severus (363–425), one of the partners in the dialogue utters the rhetorical commonplace that his deficient Latin might insult the ears of his partners. One of them answers: *uel Celtice aut si mauis Gallice loquere dummodo Martinum loquaris* ‘speak Celtic or, if you prefer, Gaulish, as long as you speak about Martin’. The context, however, does not allow to decide if the Gaulish language, as we understand it, is meant, or perhaps a vulgar pronunciation of Latin in Gaul.

8. In his book on magical medicine *De Medicamentis*, Marcellus, usually called ‘of Burdigala’ (4th/5th c.) cites a few spells and charms that traditionally have been ascribed to Gaulish (edited in Wolfgang Meid, *Heilpflanzen und Heilsprüche. Zeugnisse gallischer Sprache bei Marcellus von Bordeaux* [= Innsbrucker Beiträge zur Sprachwissenschaft. Vorträge und Kleinere Schriften 63], Innsbruck: Institut für Sprachwissenschaft 1996). But Marcellus makes nowhere the statement that those charms are Gaulish. Indeed, most of them rather conform to standard types of ‘magical language’ in the ancient world, that is, they are not taken from an actual language, but they vaguely resemble exotic words. BLOM (2007: 58–102) has argued convincingly that these spells have no evidential value for Gaulish. On the other hand, a few plant names transmitted by Marcellus probably are of Gaulish origin, but they need not be taken from the living language.

9. Sidonius Appolinarius of Lugdunum writes after 471 in a letter to his relative Ecdicius (*Epistulae* III, 3, 2): *sermonis Celtici squamam depositura nobilitas nunc oratorio stilo, nunc etiam Camenalibus modis imbuebatur* ‘the (Arvernian) nobility, wishing to cast off the scales of Celtic speech, will now be imbued (by him = Ecdicius) with oratorial style, even with tunes of the Muses’. This is a highly rhetorical, clichéd statement, which does not allow any inferences about the state of the language.

10. In the *Vita Sancti Symphoriani*, supposedly not older than the middle of the 5th c., it is told that when the Christian martyr Symphorianus of Augustodunum (165–180) was being led to the execution stand, *uenerabilis mater sua de muro sedula et nota illum uoce Gallica monuit dicens: ‘nate, nate Synforiane, †mentobeto to diuo†’* his venerable mother admonished him from the wall eagerly and notable to all (?), saying in the Gaulish speech: “Son, son, Symphorianus, think of your God!” (Rudolf Thurneysen, ‘Irisches und Gallisches’, *ZCPh* 14 (1923), 10–11). The Gaulish sentence has been transmitted in a very corrupt state in the various manuscripts; as it stands, it has been reconstructed by Thurneysen. *mentobeto* looks like a Proto-Romance verb derived from Latin *mens*, *mentis* ‘mind’ and habere ‘to have’, and it cannot be excluded that the whole utterance is an early variant of Romance, or a mixture of Romance and Gaulish, instead of being an instance of pure Gaulish.

11. Cassiodorus (ca. 490–585 A.D.) cites in his book *Variae* VIII, 12, 7 (dated 526 A.D.) from a letter to king Athalaric: *Romanum denique eloquium non suis regionibus inuenisti et ibi te Tulliana lectio disertum reddidit, ubi quondam Gallica lingua resonauit* ‘Finally you found Roman eloquence in regions that were not originally its own; and there the reading of Cicero rendered you eloquent where once the Gaulish language resounded’ (after BLOM 2007: 188). Again, this is a purely rhetorical piece of prose without much value as evidence.

12. *Endlicher’s Glossary* is a short Gaulish-Latin vocabulary, preserved in a manuscript of the 9th c. (Öst. Nationalbibliothek, MS 89 fol. 189v). In my opinion, some of the words are taken from Gregory of Tours’ *Historia Francorum* (nr. 9 above) and must therefore logically be subsequent to that. Other words give an indication that the wordlist was compiled in Germanic environments in Gaul. But it is not certain if *Endlicher’s Glossary* reflects the state of a still living language or was compiled out of merely antiquarian interest in a dead language.

109
13. In the 6th century Cyril of Scythopolis tells a story about a Galatian monk who was possessed by an evil spirit and was unable to speak, but if forced to, could only speak in Galatian: εἰ δὲ πάνυ ἐβι-άζετο, Γαλατιστὶ ἐφθέγγετο. ‘If he was forced to, he spoke in Galatian’ (Vita S. Euthymii 55; after Eugenio Luján, ‘The Galatian Place Names in Ptolemy’, in: Javier de Hoz, Eugenio R. Luján, Patrick Sims-Williams (eds.), New Approaches to Celtic Place-Names in Ptolemy’s Geography, Madrid: Ediciones Clásicas 2005, 264). In view of the isolated and late reference, it may not be excluded that it refers to a particularly incomprehensible dialect or accent of Greek.

14. Numerous authors throughout the imperial period made references to the meanings of Gaulish words (see Blom 2007: 166–201), but usually no inferences on the contemporary state of the Gaulish language can be made. For example, in Gregory of Tours’ Historia Francorum I, 32 and Venantius Fortunatus’ Carmina I, 9, 9 f. – both Merovingian authors of the 6th c. – Gaulish words are mentioned and translated. This does not mean that the language was still living at the time. Knowledge of isolated words may have been independently transmitted in learned circles.

### 3. THE WRITING OF GAULISH

At least three different writing systems were used in the course of history to write Gaulish. The Gaels invading Northern Italy in the 4th/3rd cs. BC took over the Lugano-script from the Lepontians in order to write their own language, Cisalpine Gaulish (‘Gallo-Etruscan inscriptions’; see chap. II.8–10). About half a dozen inscriptions are known from the 1st c. B.C.

In Transalpine Gaul the Greek alphabet was used from the late 3rd c. B.C. (after the 2nd Punic War). The height of the production of ‘Gallo-Greek inscriptions’ was in the century after the Roman conquest of southern Gaul (Gallia Narbonensis), i.e. from 125–25 B.C. This orthographic tradition was largely limited to the delta of the Rhône, i.e. the hinterland of the Greek city-state Massalia, which served as the starting point for the slowly spreading alphabetisation of the Gaels. Maybe the Greek alphabet was used beyond this rather small area, although the archaeological support for this is weak.

There are a few literary accounts, however. Poseidonius (transmitted in Diodorus’ Βιβλιοθήκη V 28,6) arguably writes about the situation in the Provincia Narbonensis: διὸ καὶ κατὰ τὰς ταφὰς τῶν τετελευτηκότων ἔνιος ἔπιστολάς γεγραμμένας τοῖς ὀικείοις τετελευτηκόσις ἐμβάλλειν εἰς τὴν πυράν, ὡς τῶν τετελευτηκότων ἀναγνωσόμενον ταύτας. ‘At the funerals of their deceased some therefore throw letters into the fire; they write them because they think that the deceased will read them.’ Caesar in the Commentarii de Bello Gallico talks about Gaulish tribes outside the Narbonensis, on the one hand concerning the Helvetii: in castris Heluetiorum tabulae repertae sunt litteris Graecis confectae [...] quibus in tabulis nominatim ratio confecta erat, qui numerus domo exisset, qui arma ferre possent, et item separatim pueri, senes mulieresque ‘in the camp of the Helvetii tablets in Greek script were found [...] on these tablets lists by names had been made as to how many had left their homes, who were capable of bearing arms, and separately boys, old men and women’ (BG I 29,1); on the other hand concerning the Gaels in general: neque fas esse existimant eas litteris mandare, cum in reliquis fere rebus, publicis priuatisque rationibus, Graecis litteris utantur ‘they [= the druids] consider it a sacrilege to give it [= their sacred knowledge] over to letters, while they use the Greek script for all other matters, public and private’ (BG VI 14,3). In Switzerland two short inscriptions in Greek letters were found, one of which apparently stems from the period of Roman provincial rule. In the oppidum of Manching, Bavaria, two short inscriptions in Greek letters from the 1st c. B.C. (La Tène D) were found.

After the Roman conquest of Gaul the Roman alphabet seems to have replaced the Greek script rather soon. But the Gaels retained two or three letters of the Greek alphabet in order to render specifically Gaulish sounds for which no letters existed in the Latin script (‘Gallo-Latin inscriptions’).

### 3.1. GAULISH IN ETRUSCAN SCRIPT

See the chapter about Cisalpine Gaulish II.8–10.
3.2. GAULISH IN GREEK SCRIPT

1. On stone inscriptions only capital letters (‘majuscules’) were used. For the purpose of transcription, today mainly lower-case letters (‘minuscules’) are being used. Because of the relatively small number of texts, some of the orthographic conventions are not totally clear.

2. In Galatian names in the Greek script ἀ apparently can stand for ej or ē (e.g. Δειόταρος = *dēotaryos or deiotaryos), u for *ā (e.g. δρονέμετον < *drā-).

Ill. 3.2.: the Greek alphabet in Gaul.
3.3. GAULISH IN LATIN SCRIPT

Inscriptions in the Roman alphabet can be found on the entire soil of ancient Gaul and beyond its borders. Monumental stone inscriptions from Gaul in the imperial period use Roman capital letters, which are identical to our modern scripts. Differences from our modern usage are the use of an over-long_I_(I_longa)_(for_i?)_and_the_occasional_use_of_two_parallel_hastae_for_E.

Most Gaulish texts on other materials are written in the Roman cursive script, a shorthand variant of the Roman alphabet employed in everyday purposes. The reduced shapes of its letters, often looking linear, is due to the material on which was written (lead, pottery, wax, etc.). The Roman cursive script is very difficult to read. Not infrequently this has consequences for the interpretation of Gaulish texts. The tables following below will provide a survey of the formal variation of cursive letters. The examples are taken from an extensive body of Gaulish texts, but note that some of the best known lead tablets have not been taken account of (Chamalières, Rom). Note also:

1. the typical cursive_e_and_f_, consisting of two strokes; two-stroked_e_is_sometimes_even_used_in_inscriptions_in_capital_script.
2. long_i_(i_longa)__(for_i?)_beside_i_with_normal_height.

4. A THORNY PROBLEM OF GAULISH PHONOLOGY

The phonological system of Gaulish, possibly also of Lepontic, contains a specific sound that is traditionally called *tau Gallicum* after a passage in Vergil’s *Catalepton* 2, 4:

> Corinthiorum amator iste uerborum,  
> iste iste rhetor, namque quatenus totus  
> Thucyoides, tyrannus Atticae febris:  
> *tau Gallicum*, min et sphin ut male illisit,  
> ita omnia ista uerba miscuit fratri.

That lover of Corinthian words,  
that… that rhetor! Even though being a complete  
Thucyides, he is a tyrant of the Attic fever:  
how he badly belched (?) the *tau Gallicum*, the *min* and *sphin*,  
thus he mixed all those words for his brother.

It is uncertain if the sound *tau Gallicum* that Vergil mentions is the same sound as the one for which that term is used today. Today it denotes a phoneme of only roughly known value that is represented by a great number of different spellings in Gaulish and possibly also Lepontic inscriptions:

- **Roman:** t, tt, th, d, dd, d, dd, ts, ds, s, ss, sc, sd, st  
- **Greek:** θ, θθ, σ, σσ, σθ, τ, ττ
- **Etruscan:** san, zeta (also sigma?)

Wherever etymological speculations are possible, this phoneme, if it is one, goes back to earlier *Ds*, *st* and *Dt* (*D* = any dental obstruent). Etymologically it clearly corresponds to Insular Celtic s < *ss* in word-initial and -internal position (against *s* that first became *h*, then Ø in Insular Celtic word-internally); e.g.:

- PIE *nezd-tamo-* (?) ‘next’, Gaul. nezdamon, OIr. nessam, Cym. nessaf  
- PIE *med-tu-* ‘judgement’, Gaul. medh-, etc., OIr. mess  
- PIE *melit-to-* ‘sweet’, Gaul. melitdo-, etc., OIr. milis, Cym. melys  
- PIE *h(ster- ‘star’, Gaul. Dirona (?), OIr. ser, Cym. syr  
- PIE *tud-to- ‘pushed’, Gaul. tuθθus ‘loads’  
- PIE *g’ost-i- ‘guest, stranger’, Lep. uvamokozis, ḟosioisio (?)  

Vorkelt: *is-to- ‘this’, Lep. ḟosos

Sometimes *tau Gallicum* can also stand for strong, intensified (?) s:

- PIE *meh,ns ‘month’, Gaul. mid, OIr. mis-  
- also in acc. pl. Lep. siTeš, Cisalpine Gaul. artuaš?

and perhaps also for analogically re-introduced, strongly pronounced word-internal s, in opposition to regularly weakened (lenited?) intervocalic s:

- Pre-Celt. *buisje* ‘to want to become’, Gaul. bissiet ‘will be’, *bissiete ‘you will be’ (?)

No conclusive evidence exists that Celtiberian possessed a comparable sound. Inherited *st* is retained in Celtiberian, e.g. stena, bouston. Other combinations of dental sounds and s may already have been simplified to mere s(s). The many orthographic variants in Gaulish suggest that this sound had no direct equivalent in Latin and Greek, and that it featured a dental (because of the frequent spellings with d, t, …) and a fricative component (because of s, θ,…). The frequent double spellings and etymo-
logical considerations furthermore suggest gemination. Many phonetic suggestions for this sound have been proposed (see ESKA 1998: 116), but according to the communis opinio it may have been a geminate affricate [ts]. On the basis of a few forms where tau Gallicum in Gaulish cannot be derived from dental clusters or from *st, i.e.:

- eddic ‘and’ (cp. etic < *eti-₅k₅e)
- gnatha ‘girl’ (cp. nata < *ggh₁to- ‘born’)
- madhuro (cognate with Lat. maturus?)
- [C]athuboduae (to Gaul. cattu- ‘battle, war’)
- bued ‘may be’ (cp. buet=id, deuorbuet=id)

but where the sign perhaps represents lenited t, ESKA assumes that tau Gallicum may have stood for the so-called slit-t, a sound peculiar, for example, to Southern Hiberno-English.

Literature:

5. BASIC LITERATURE ABOUT GAULISH

Since Gaulish is by far the best researched Old Celtic language, the number of publications devoted to it is enormous compared to Lepontic and Celtiberian. This is especially true for specialised studies. Therefore I will restrict myself here to the most important handbooks and introductions.

5.1. editions, grammars and dictionaries:

6. GAULISH TEXTS

The material discussed here represents a collection of the more interesting texts. Short fragments and severely damaged pieces will be ignored.

6.1. GALLO-GREEK INSCRIPTIONS

For the greatest part, the Gallo-Greek inscriptions come from a small area at the mouth of the river Rhône, in the North-Western hinterland of the Greek city-state Massalia. Gallo-Greek inscriptions usually do not extend beyond half a dozen words. At the moment about 300 texts are known, most of them fragmentary, consisting of a few letters only. Some of the Gallo-Greek inscriptions are among those Gaulish texts that have been longest known. Gallo-Greek inscriptions are mostly written in scriptura continua; in the transcription, however, I will insert spaces at the probable word boundaries.
Ill. 6.2.: The central area of distribution of Gallo-Greek inscriptions (from: RIG I, 16).
